# BIOMECHANICAL FACTORS ASSOCIATED WITH TIME TO COMPLETE A CHANGE OF DIRECTION CUTTING MANEUVER

BRENDAN M. MARSHALL,<sup>1,2,3</sup> ANDREW D. FRANKLYN-MILLER,<sup>1,4</sup> ENDA A. KING,<sup>1</sup>  
KIERAN A. MORAN,<sup>2,3</sup> SIOBHÁN C. STRIKE,<sup>5</sup> AND ÉANNA C. FALVEY<sup>1,4</sup>

## Key Biomechanical Factors of a Cutting Task

gastrocnemius muscles (ankle plantar flexors) are overloaded more, and ground contact times are shorter, in hurdle jumps than in drop jumps.

Pelvic control exercises should be prescribed in an effort to enhance frontal plane pelvic control during eccentric loading. Frontal plane control of the pelvis in single-limb stance is determined, at least in part, by the neuromuscular ability of the gluteal muscles, and in particular gluteus medius (23). Common exercises to train the gluteals include bridging and resisted side steps (29), as well as more sport-specific exercises such as single-leg squats and single-leg landings (21).

To encourage athletes to rotate their trunk in the desired direction of travel while cutting, augmented technique feedback (e.g., video playback combined with coaching advice) may be particularly useful. Myer et al. (22) found that augmented feedback on deficits identified in a drop jump assessment resulted in a significant improvement in jumping technique.

# Results

**Table 1** Mean ( $\pm$ SD) descriptive data and graded maximal test results of the subjects (N = 13)

Age (years)	$35 \pm 5$
Height (cm)	$179 \pm 6$
Body mass (kg)	$76.6 \pm 5.6$
BMI ( $\text{kg m}^{-2}$ )	$23.9 \pm 1.6$
$\text{VO}_{2\text{max}}$ ( $\text{l min}^{-1}$ )	$4.1 \pm 0.4$
$\text{VO}_{2\text{max}}$ ( $\text{ml kg}^{-1} \text{min}^{-1}$ )	$54.1 \pm 3.6$
AerT (% of $\text{VO}_{2\text{max}}$ )	$57.9 \pm 6.2$
AnT (% of $\text{VO}_{2\text{max}}$ )	$80.6 \pm 4.7$
$\text{HR}_{\text{max}}$ (bpm)	$183 \pm 9$
$v\text{VO}_{2\text{max}}$ ( $\text{km h}^{-1}$ )	$15.9 \pm 0.8$
$\text{BLa}_{\text{max}}$ ( $\text{mmol l}^{-1}$ )	$11.8 \pm 2.5$

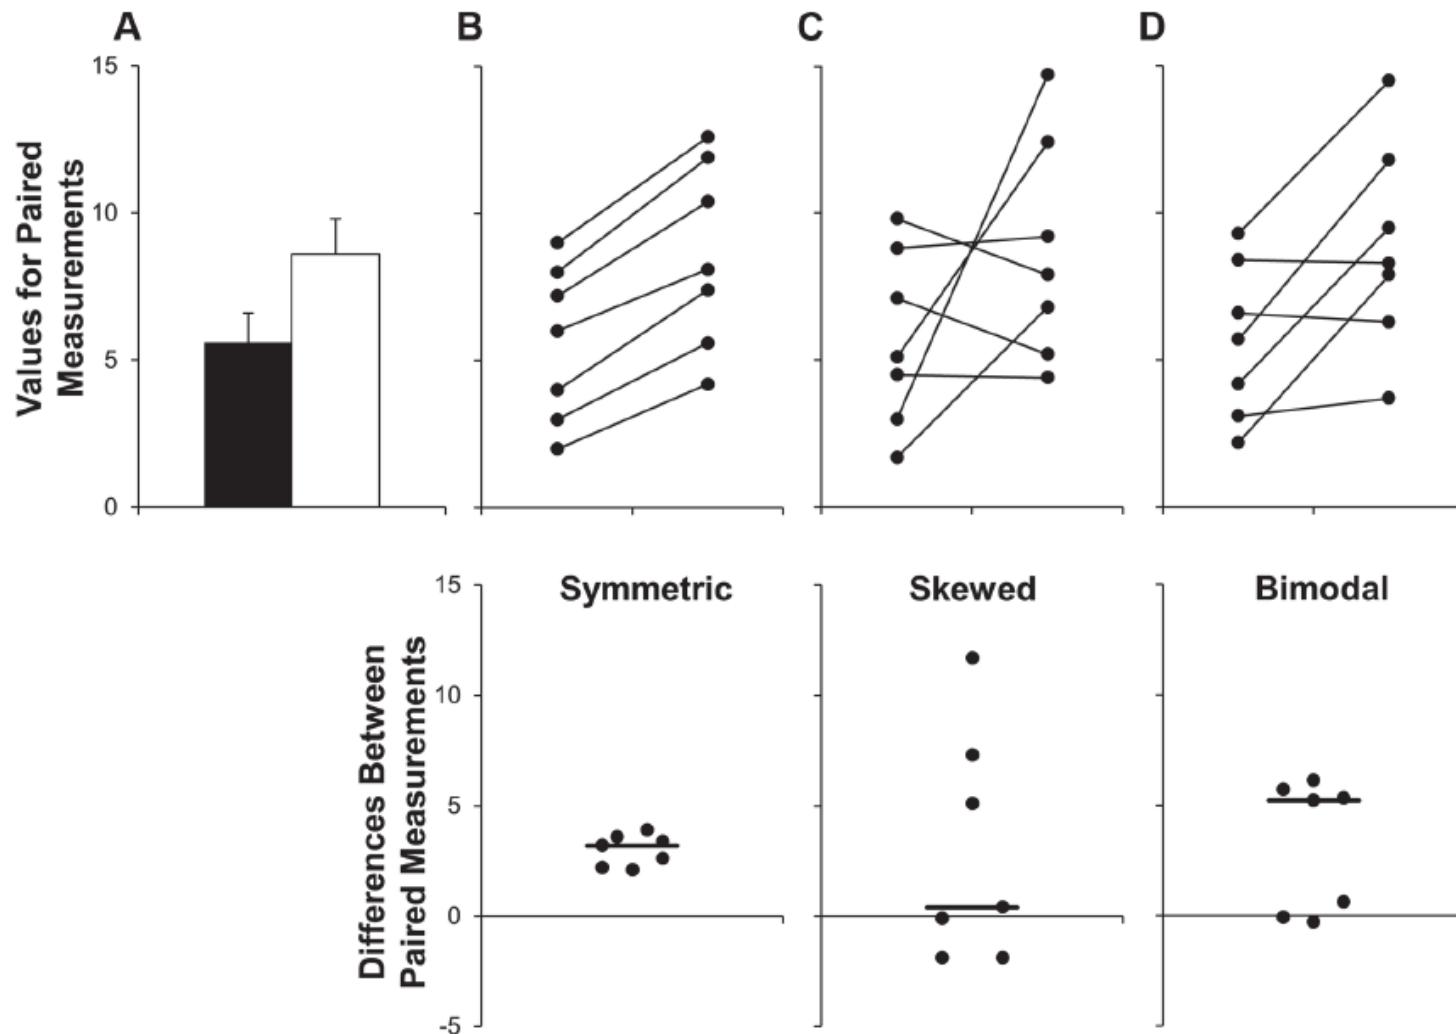

*BMI* body mass index,  $\text{VO}_{2\text{max}}$  maximal oxygen uptake, *AerT* aerobic threshold according to Aunola and Rusko (1984), *AnT* anaerobic threshold according to Aunola and Rusko (1984),  $v\text{VO}_{2\text{max}}$  maximal speed at the graded maximal treadmill test,  $\text{HR}_{\text{max}}$  maximal heart rate,  $\text{BLa}_{\text{max}}$  maximal blood lactate level at the graded maximal treadmill test

## Understanding Effect Sizes

# Procédure « scientifique »

1/ Faire un tableau de vos données en indiquant pour chaque colonne la variable prise en compte.

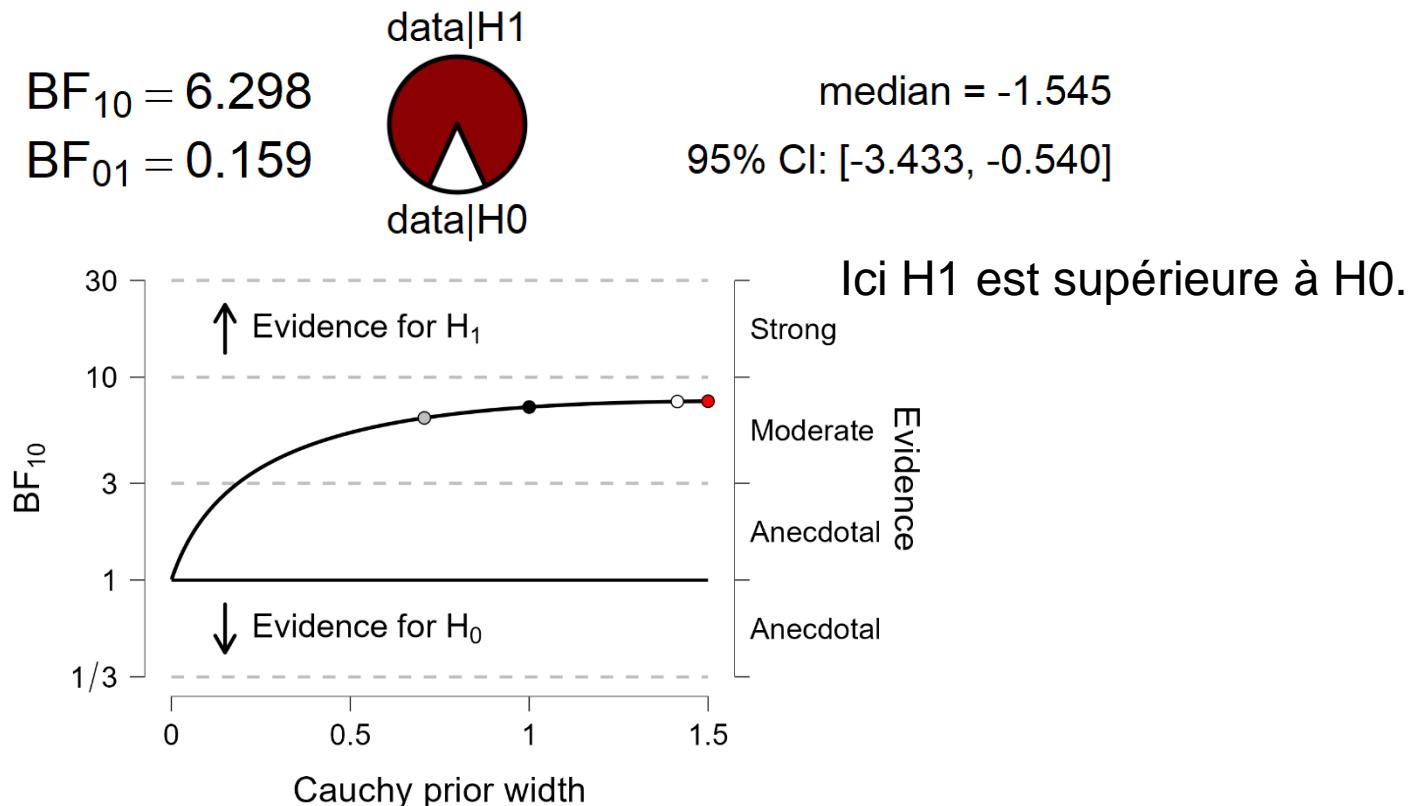

Exemple :

	Hauteur CMJ Pre	Hauteur CMJ Post
1	20.03	28.15
2	21.29	28.15
3	42.93	44.31
4	20.03	24.37
5	30.15	34.9

# Procédure « scientifique »

2/ Utiliser JASP pour savoir si l'hypothèse est vérifiée ( $H_1$ ).

Exemple :  $BF_{10} = 6.298$   
 $BF_{01} = 0.159$

<https://www.youtube.com/watch?v=rUWlwOfLyZc>

# Procédure de traitement

1/ Faire un tableau de vos données en indiquant pour chaque colonne la variable prise en compte et calculer la moyenne, la médiane et l'écart-type.

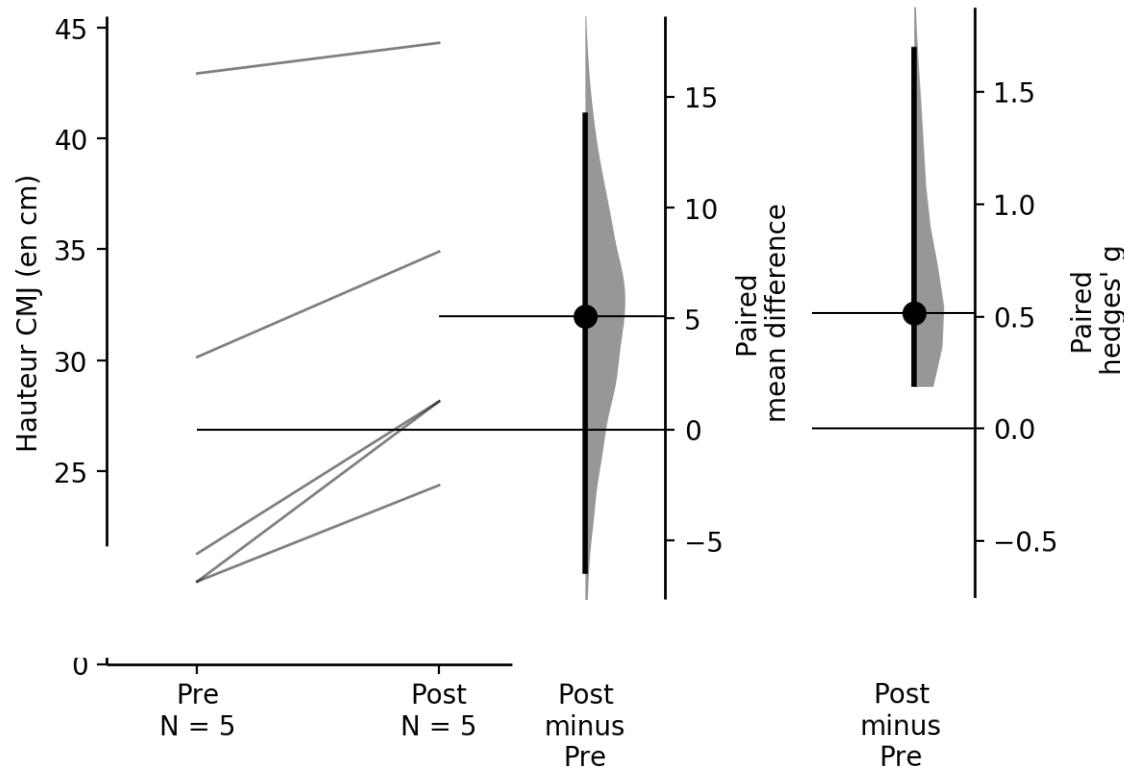

Exemple :

	Hauteur CMJ Pre	Hauteur CMJ Post		Hauteur CMJ Pre	Hauteur CMJ Post
1	20.03	28.15			
2	21.29	28.15	Moyenne	26,886	31,976
3	42.93	44.31	Médiane	21,290	28,150
4	20.03	24.37	Ecart type	9,917	7,871
5	30.15	34.9			

# Procédure de traitement

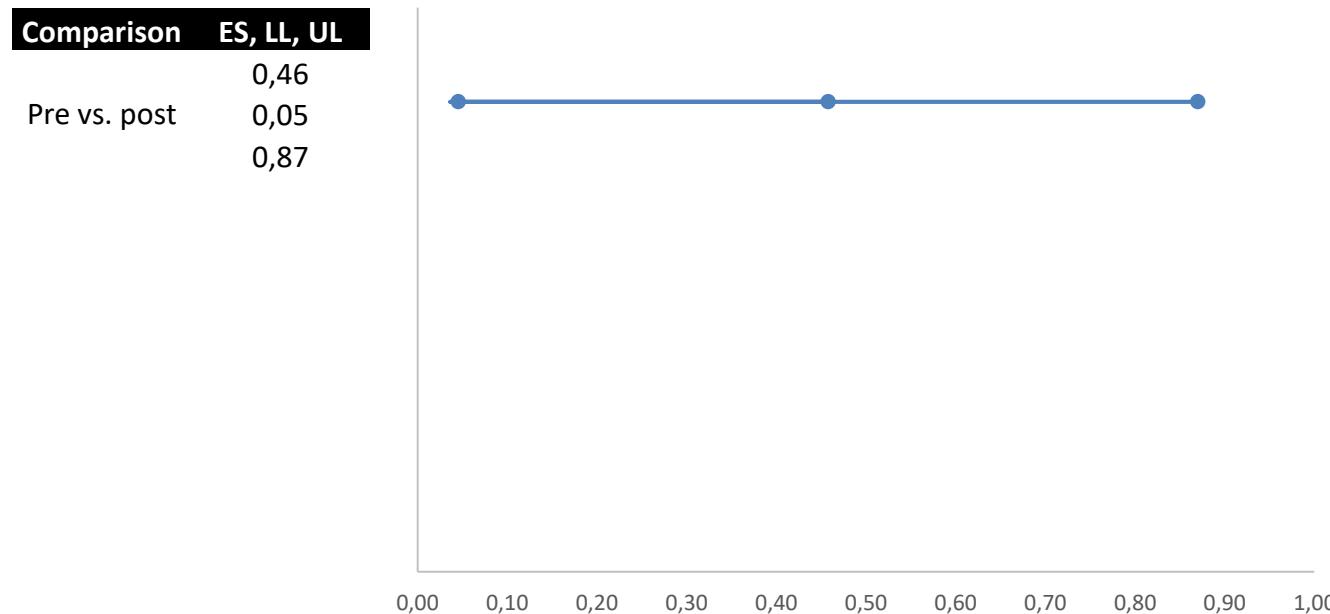

2/ Pour visualiser celles-ci, éditer le graphique à partir de <http://www.estimationstats.com/#/>.

Exemple :

# Procédure de traitement

3/ Intégrer les données dans la feuille excel d'Anthony N Turner :  
Cf moodle (Feuille Anthony N Turner).

# Tests et Training

Vous filmerez votre protocole et utiliserez dartfish pour insérer les éléments pertinents.

Vous montrerez quelques mouvements réalisés lors de vos entraînements.

# 1. Savoir où aller chercher l'information

- Google scholar,
- Bibliothèque universitaire,
- PubMed,
- Researchgate,
- ...
- Et aussi sites (français/anglais) et blogs avec références en fin d'articles ou de posts.

# Don't forget

Know what to evaluate, how to analyze it, and especially which interpretations you can make.

# Bonus

- 8x30 meters with 2' rest.

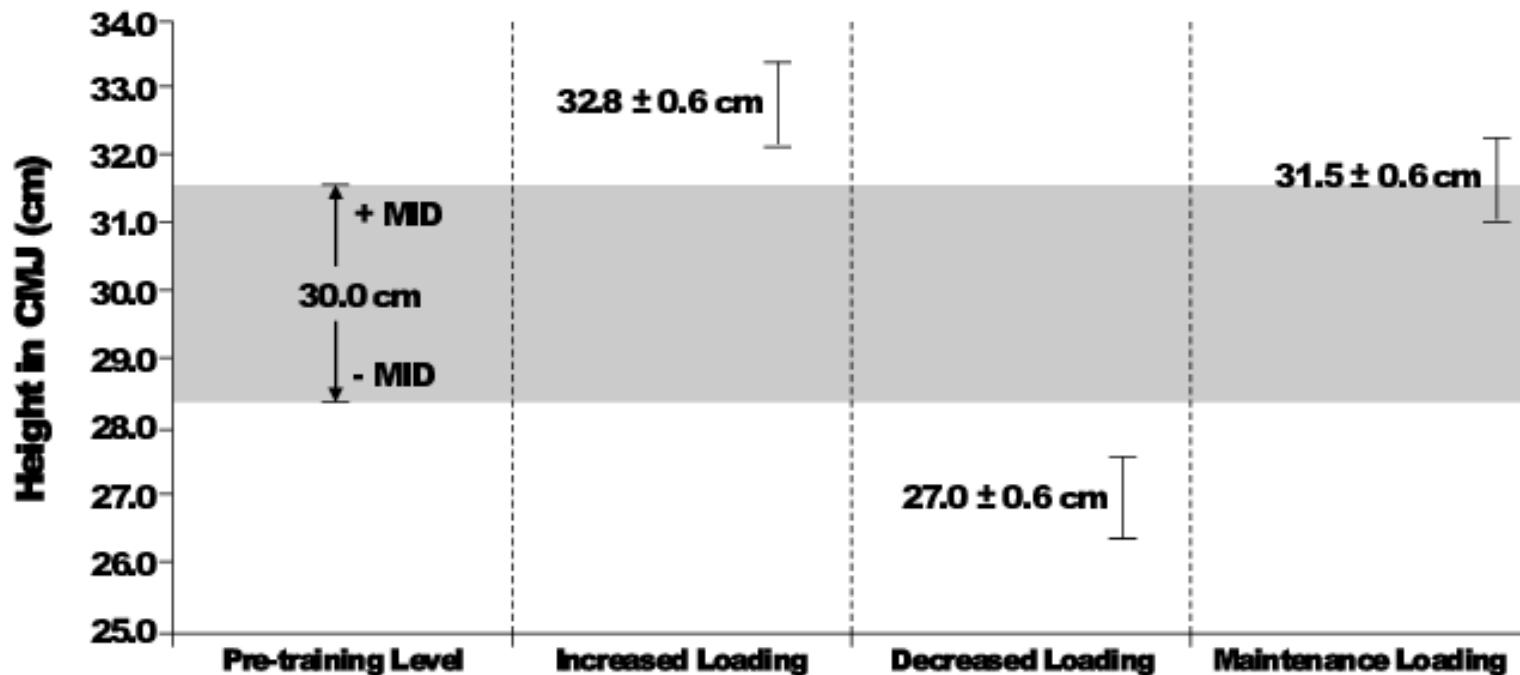

## Analysis of time splits

- $\text{TEM} = \text{SD}_{\text{diff}} / \sqrt{2}$
- $\text{MID} = \text{TEM} \times 1,761$

Claudino JAE 2016

# Procédure de traitement (possible)

Lorsque le test est reproduit plusieurs fois, faire une analyse individuelle.

# Procédure de traitement (possible)

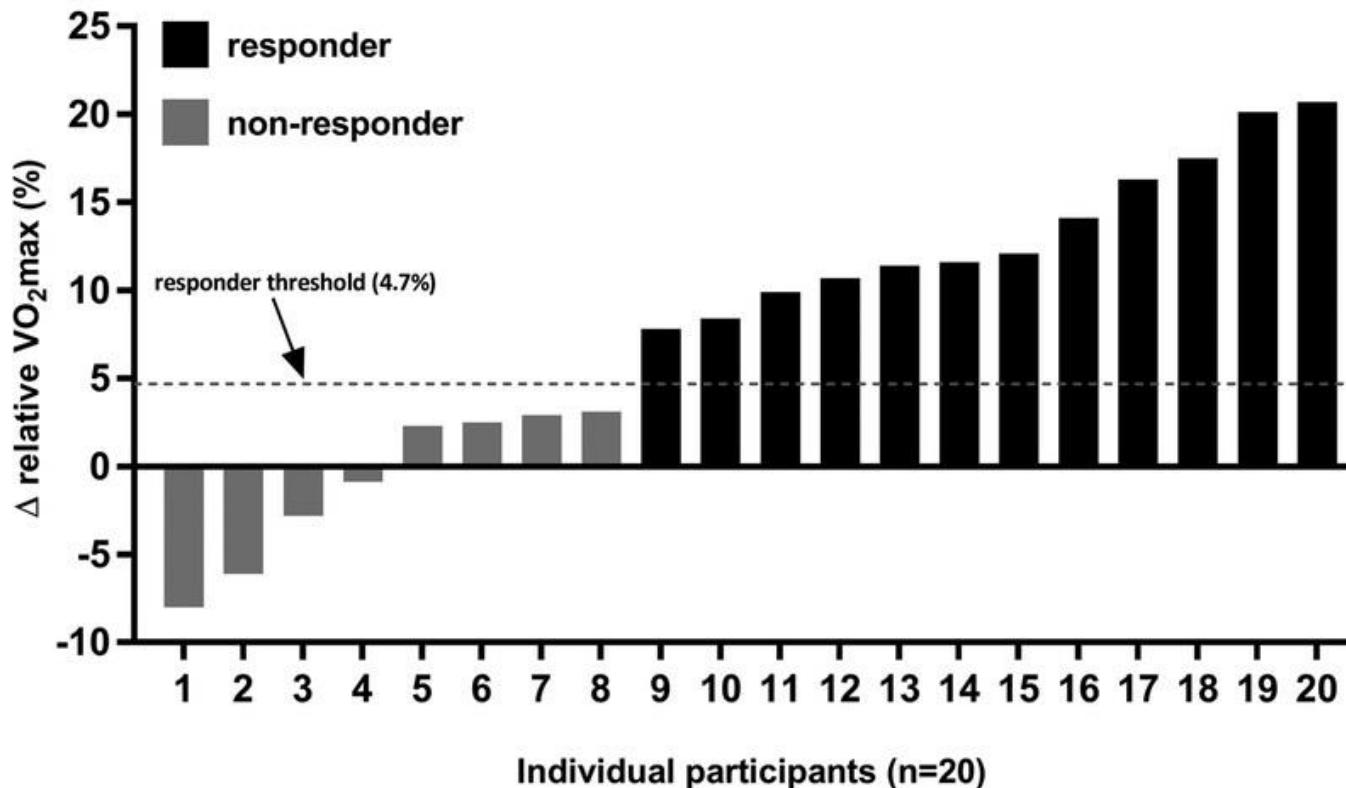

**Table 1:** Data from reliability sessions for CMJ performance

Athlete X	Day 1	Day 2	Difference Scores
