

$$2] u_n = (-1)^n \operatorname{Arctan} \left(\frac{1}{n} \right)$$

$\operatorname{Arctan} \left(\frac{1}{n} \right) \searrow$ (comp. de \nearrow et \searrow) et $\rightarrow 0$ (continuité de Arctan en 0)

$$\text{Leibniz} = \left[\sum u_n \text{ CV} \right]$$

$$3] u_n = \frac{\cos(n)}{(n^2)!} \quad (n \text{ m positive})$$

~~Estimation~~ $|u_n| \leq \frac{1}{(n^2)!} = v_n \leq \frac{1}{n^2} \quad (\text{car } n! \geq n \text{ pour } n \geq 1)$

~~Estimation~~

Comparaison $|u_n| \leq \frac{1}{n^2} + \text{Riemann } \sum |u_n| \text{ CV}$

$$\text{CVA} = \left[\sum u_n \text{ CV} \right]$$
